## Question 1: Filling in the Missing CSS Properties and HTML Tags

**Problem Statement:** The given code snippet has missing CSS properties, values, and HTML tags (indicated by "\_" and <\_>). The requirements state that the text color must have good contrast with the blue background (#0066CC), and the header area must use the Arial font family.

### Completed and Corrected Code:

```
<!DOCTYPE html>
<html lang="en">
<head>
  <title>Trillium Media Design</title>
  <meta charset="utf-8">
  <style>
    body {
      background-color: #0066CC; /* Medium Blue Background */
      color: #FFFFFF; /* White text color selected for high contrast ratio */
    }
    header {
      font-family: Arial; /* Replaced "_" with font-family property and Arial value */
    }
  </style> <!-- Missing closing style tag filled -->
</head> <!-- Missing closing head tag filled -->
<body>
  <header>
    <h1>Trillium Media Design</h1>
  </header>
  <p>Our professional staff takes pride in its working relationship with our clients by offering personalized services that listen to their needs, develop their target areas, and incorporate these items into a website that works.</p>
</body>
</html>
```

## Explanation of Changes:

- **Contrast (color: #FFFFFF;):** Since the background color is a deep blue (#0066CC), choosing white (#FFFFFF) ensures an excellent contrast ratio, satisfying standard web accessibility guidelines (WCAG) for readability.
- **Header Font (font-family: Arial;):** The placeholders inside the header selector were replaced with the proper CSS property font-family and the requested value Arial.
- **Missing Tags (</style> and </head>):** The placeholders <\_> right before the <body> tag were successfully filled with the mandatory closing tags to properly structure the document head.

## Question 2: Finding the Structural Error in the Provided Code

**Problem Statement:** Analyze the provided code block and explain why the web page will not display or render properly within a web browser.

### Identification of the Error:

The critical syntax error lies within the document's <head> section, specifically right after the CSS rules where the internal style sheet is supposed to end. Instead of using a proper closing tag, an opening <style> tag was rewritten by mistake.

```
font-size: 1.2em; }  
<style> <-- ERROR: This should be a closing tag </style>  
</head>
```

### Why It Prevents Proper Browser Display:

1. **Unclosed Style Block:** Browsers parse HTML sequentially. Because the initial <style> tag is never closed with a forward slash (</style>), the browser assumes that everything following it—including the </head>, <body>, and the actual content elements (<header>, <h1>, <main>)—is still part of the CSS stylesheet rules.
2. **Hidden Content Rendering:** Since the browser interprets the actual content text as raw, unparseable CSS syntax, it fails to construct the Document Object Model (DOM) correctly for the body. Consequently, the browser will render a completely **blank white page** to the user.

### The Corrected Version of the Code:

```
<!DOCTYPE html>  
<html lang="en">  
<head>  
  <title>Trillium Media Design</title>  
  <meta charset="utf-8">  
  <style>  
    body {  
      background-color: #000066;  
      color: #CCCCCC;  
      font-family: Arial, sans-serif;  
      font-size: 1.2em;  
    }  
  </style> <!-- FIXED: Changed from <style> to </style> -->  
</head>
```

```
<body>
  <header>
    <h1>Trillium Media Design</h1>
  </header>
  <main>
    <p>Our professional staff takes pride in its working relationship with our clients by offering
personalized services that listen to their needs, develop their target areas, and incorporate these
items into a website that works.</p>
  </main>
</body>
</html>
```
