

1. Which type of CSS is coded in the body of the web page as an attribute of an HTML tag?

- **Answer:** b. inline
- *Explanation:* Inline styles are written directly within the HTML element's tag using the style attribute, affecting only that specific element.

2. Which of the following is the CSS property used to set the background color of a web page?

- **Answer:** b. background-color
- *Explanation:* In CSS, the correct property to define background color is background-color. bgcolor is an outdated HTML attribute and is no longer recommended.

3. Which of the following describe two components of CSS rules?

- **Answer:** a. selectors and declarations
- *Explanation:* A CSS rule consists of a selector (which points to the HTML element you want to style) and a declaration block (which contains one or more declarations separated by semicolons).

4. Which of the following associates a web page with an external style sheet?

- **Answer:** c. <link rel="stylesheet" href="style.css">
- *Explanation:* The <link> tag placed inside the <head> section is used to connect external resources. It requires rel="stylesheet" to define the type and href to point to the file destination.

5. Which of the following configures a background color of #00CED1 for a web page using CSS?

- **Answer:** a. body { background-color: #00CED1; }
- *Explanation:* To apply a style to the entire visible web page, the body selector must be used along with the correct CSS property background-color.

Error Identification: The structural issue causing the web page to render incorrectly is found on line 12 inside the <head> section. Instead of closing the internal style sheet with a proper closing tag, a duplicate opening <style> tag was written by mistake.

HTML

```
/* Broken Segment from Code */
font-size: 1.2em; }
<style>  <-- ERROR: This must be changed to </style>
</head>
```
