

This section evaluates two real-world web pages based on professional modern design standards. One page represents an appealing corporate layout, while the other represents an unappealing, outdated interface.

EXAMPLE 1: THE APPEALING WEBSITE

- **a. URL of the Website:** <https://www.apple.com>
- **b. Does this page use tables?** No. The page does not use HTML tables for its layout or data. It utilizes modern CSS Flexbox and Grid structures to align its product showcases seamlessly.
- **c. Does this page use CSS?** Yes, extensively. CSS is used for advanced grid layouts, continuous responsive scaling across screen viewports, premium typography configuration (San Francisco font), smooth hover animations, and maintaining white-space ratios.
- **d. Is this page appealing or unappealing? (3 Reasons):**
 - **Stunning Minimalism:** It uses ample white space (negative space) which prevents cognitive overload and lets the user focus purely on the products.
 - **High-Quality Visual Hierarchy:** Large, crisp product imagery combined with bold, beautifully aligned typography guides the reader's eyes naturally from top to bottom.
 - **Flawless Contrast and Consistency:** Text-to-background contrast is perfectly balanced, and the navigation system remains uniform across all subpages.

EXAMPLE 2: THE UNAPPEALING WEBSITE

- **a. URL of the Website:** <https://blinke.com> (An online novelty shop for glowing/light-up items).
- **b. Does this page use tables?** Yes. The site relies heavily on older HTML table structures and dense side-by-side grids to forcibly organize product imagery and listing blocks.
- **c. Does this page use CSS?** Yes, but primarily for basic text adjustments, background colors, and simple box dimensions. It lacks modern CSS architecture like fluid responsive queries or advanced layouts.
- **d. Is this page appealing or unappealing? (3 Reasons):**
 - **Cluttered and Overwhelming Layout:** The page packs too many glowing banners, flashing products, and dense text side-by-side with almost zero margins or breathing room.
 - **Poor Contrast and Color Choice:** It uses highly vibrant, saturated, and conflicting neon font colors on top of busy backgrounds, making text hard to read.

- **Outdated Aesthetic:** The layout reminds users of early 2000s web design, lacking modern visual hierarchy or structural alignment.
- **e. What would you do to improve this unappealing page?**
 - **Implement Modern CSS Grid:** I would strip away the old table-like layout and implement a clean 3 or 4-column modern CSS Grid with unified item cards.
 - **Introduce Controlled White Space:** I would increase padding and margins between product boxes to let the page breathe, significantly improving scannability.
 - **Clean Up the Color Palette:** I would replace the chaotic neon text styling with a dark, uniform, modern dark-mode theme where only the actual product pictures glow, creating a professional and purposeful contrast.
